Education

The University of Texas at Dallas, MS in Information Technology and Management

Aug 2024 – May 2026

Pune Institute of Computer Technology, BE in Computer Engineering

Aug 2016 – Jun 2020

Skills

- **Frontend:** React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Angular, Next.js, Responsive Design, WCAG, ARIA
- **Backend & APIs:** Node.js, Python, Java, Spring Boot, RESTful APIs, Microservices
- **Testing & Quality:** Unit Testing, Integration Testing, TDD, Code Reviews, Technical Documentation
- **Cloud & DevOps:** AWS(Certified Solutions Architect – Associate), Docker, CI/CD, GitHub Actions, Git
- **AI Dev Tools:** Claude Code, GitHub Copilot, Cursor
- **Mobile:** Android SDK, Kotlin, Jetpack Compose, MVVM

Professional Experience

Copart, Dallas, Texas, USA

May 2025 – May 2026

Software Engineer Intern

- Built and shipped features using React, TypeScript, JavaScript, and Node.js across **12+** production modules, handling full-stack ownership of critical user-facing pages and backend services serving millions of users.
- Developed accessible, responsive user interfaces using HTML5, CSS3, and modern frontend fundamentals, collaborating with designers and product managers throughout the full development lifecycle from technical design through release.
- Troubleshoot and debugged production issues using logs, metrics, and monitoring tools, participated in on-call rotation, and created detailed technical documentation explaining tradeoffs and rationale.
- Accelerated delivery by **25%** using Claude Code and GitHub Copilot, helped improve frontend architecture and shared components, and contributed to code reviews and continuous improvement throughout.

HSBC Software Development, Pune, Maharashtra, India

Sep 2020 – Jul 2024

Software Engineer

- Engineered mobile banking features using Kotlin and Android SDK, subsequently developing and shipping public-facing web features React, TypeScript, HTML5, and CSS3 for global HSBC banking platforms used by **10M+** people across **15+** countries.
- Built and supported consumer-facing subscription and financial product features across **10+ release cycles**, developing accessible, responsive interfaces and instrumenting features for observability and production monitoring.
- Collaborated with designers, product managers, and engineers to ship features end-to-end, created detailed technical documentation, and participated in on-call rotation to support systems in production.
- Delivered SaaS Migration features eliminating **100,000+** support calls annually, demonstrating strong product judgment and ability to ship high-impact consumer-facing features at scale.

Projects

MovieFinder – Mood-Based AI Recommendation Engine

- Built MovieFinder, an AI-powered movie recommendation platform where users describe their mood and receive personalized recommendations, using React, TypeScript, Python Flask, and PostgreSQL.
- Developed accessible, responsive user interfaces with HTML5 and CSS3, instrumented features for observability using production logs and metrics, and troubleshoot issues end-to-end across the full stack.
- Used Claude Code and GitHub Copilot throughout, created detailed technical documentation, and helped improve frontend architecture and shared components across the project lifecycle.

XBoard – News Feed Web Application

- Built XBoard, a news aggregation platform that fetches and presents real-time news across categories from Flipboard's RSS feed using REST APIs, gaining hands-on experience with news presentation and real-time data delivery.
- Developed the full frontend from scratch using HTML5, CSS3, Bootstrap, and JavaScript, implementing Accordions and Image Carousels to create an intuitive, responsive news browsing experience.
- Gained practical experience presenting and organizing news content for readers, understanding how information structure and UI decisions affect how people consume news.
